DESCRIPTORS: Measurement, *Nitrogen, Metabolism, *Brain, *Carbon monoxide poisoning, Glutamine.

Acute and sub-acute CO poisoning in the brain is accompanied by an accumulation of considerable quantities of ammonia and residual nitrogen more pronounced with sub-acute poisoning in the absence of changes of insignificant increase of free glutamine in the brain. Sub-acute poisoning after 24 to 48 hrs leads to a decrease of amide nitrogen of the proteins in the brain averaging 10 mg%. (Author)
